*The Complete Solution for the
Corrugated Industry*

Cost Estimating
Order Entry
Planning
Production Control

Order Entry & Production Control

Combined with PC-Topp Front Office, PC-Topp becomes a powerful complete solution for plants in need of software both for commercial data processing and production. Alongside its proven core functionalities for scheduling and production control, this all-in-one package features cost estimating, order entry, invoicing, and customer management.

■ **PC-Topp + PC-Topp Front Office = A Full Solution for Plants Requiring Software for Commercial Data Processing As Well As Production:**

- **Corrugator & Conversion Machine Scheduling**
- **Production Control**
- **Cost Estimating**
- **Order Entry**
- **Invoicing**
- **Customer Management**

Front Office

PC-Topp Front Office is a module for PC-Topp that has been created to provide cost estimating and order entry functionalities for Corrugated plants without an order entry / enterprise resource planning (ERP) system.

PC-Topp Front Office's cost estimating engine calculates a fast, accurate pricing based on the customer's pricing policy and the plant's specific production conditions (machines, raw materials, shipping costs, ...).

The system supports fast and easy order entry, letting the user create new articles from similar ones within seconds. It also provides features for quotation issuing, invoicing, and customer management.

PC-Topp.net

PC-Topp was designed to integrate itself smoothly with any ERP or order entry system a customer may be using, bridging the gap between commercial order processing on the one hand and planning and production on the other with a cost effective and proven expert solution.

PC-Topp is the information central of the plant, guaranteeing permanent data exchange between host system, Planning, and Production.

Perfectly integrated with the plant's commercial IT and equipped with online links to production, PC-Topp takes orders and material stock data from the host system, and provides live production information to the host in real time.

PC-Topp.net

Front Office

Especially in new markets we see an increasing demand for an all-in-one software solution for Corrugated production comprising planning and production control as well as basic ERP functionalities.

Thanks to the merger with Rhapsos S.A. in 2010 we are able to cater to this need. In cooperation with Rhapsos S.A. we have developed an optional enhancement of our expert scheduling system which supplies the required features, thereby creating PC-Topp Front Office.

With PC-Topp Front Office, our proven scheduling system PC-Topp becomes a full solution for plants without an ERP system of their own.
